

Is Your Biodiesel Plant Ready For Stricter Standards?

- Are you prepared to meet the upcoming stricter biodiesel quality standards (e.g. B50)?
- Do you struggle to meet quality requirements when using waste oils as feedstock?
- Is high monoglyceride content already causing issues?
- Are you facing quality challenges with your products or by-products?

BDI: A Proven Partner in Multi-Feedstock Biodiesel

With over 25 years of experience, BDI is the global leader when it comes to technologies for the production of standard-compliant biodiesel from used cooking oil, animal fats, trap grease, POME, PSO and more.

Our expertise helps you retrofit your existing plant for:

- Integration of alternative, waste feedstock
- Higher product quality (EN14214 compliant)
- Lower OPEX

BDI's 8-Step RetroFit Program

A clear, structured approach to upgrading your plant: fast, efficient, and proven by over 30 successful projects worldwide.

BDI Customer Service

BDI-BioEnergy International supplies its customers with outstanding service to keep their plants running in optimal condition. A combination of highly competent service professionals and state-of-the-art artificial intelligence software tools ensure non-stop biofuel production.
